

SMART CABINET

Real time consignment control system designed to boost operational efficiency and profitability for all stakeholders

Saves staff time in the field by eliminating the need for manual inventory counts in supply management

Using artificial intelligence, the Smart Cabinet optimizes inventory management and predicts product expiration dates

The Smart Cabinet automates replenishments, helping to prevent stockouts

Automated process that minimizes human intervention, streamlining operations and reducing errors

The **Smart Cabinet** technology, powered by AI algorithms and RFID, captures detailed information on products stored and automatically tracks consumption. The key benefits include:

Batch Number - Serial Number - Expiration Date
Consumption / Replenishment

① Identification

② Consumption

③ Detection

④ Record
